

OWEN BALDWIN

AI PRODUCT & SOLUTIONS | APPLIED AI | WORKFLOW AUTOMATION | CREATIVE TECHNOLOGY

London, UK | +44 7518 432801 | owenabaldwin@gmail.com | [linkedin.com/in/owenajbaldwin](https://www.linkedin.com/in/owenajbaldwin) | www.owenabaldwin.com

PROFILE

AI product and solutions professional with four years of experience taking ambiguous, domain-heavy problems from discovery through product definition, rapid prototyping, applied-AI design, stakeholder demos and iteration. Built an AI-native film/VFX platform by working directly with industry leaders, and independently introduced workflow software and AI prototypes inside a non-technical organisation. Strongest at the interface between users, product and technology: understanding how work actually happens, identifying where AI creates practical value, shaping the solution and communicating it clearly. Background in music and film industries.

CORE SKILLS

Product & discovery: stakeholder discovery, workflow mapping, requirements, use-case scoping, MVP definition, prioritisation, product specifications, roadmaps, human-in-the-loop design

AI & automation: LLM orchestration, RAG, embeddings, vector search, agentic workflows, prompt design, evaluation/validation logic, knowledge assistants, workflow automation

Solutions & delivery: rapid prototyping, proof of concepts, solution design, demos, user feedback loops, implementation thinking, documentation, stakeholder communication, investor/product storytelling

Technical: Ruby on Rails, TypeScript, Angular, PostgreSQL/SQL, REST APIs, Docker, Git

Domain: film, VFX and creative-production workflows; creative technology; early-stage start-ups

EXPERIENCE

Ilibrium — Product Lead, Product Builder and Founder's Associate

2022–Present | Early-stage film & VFX software;

AI-native production platform focused on turning complex film-production workflows into structured, usable data and decision support.

- Led discovery with senior VFX supervisors, producers and heads of department, mapping script breakdown, bidding and planning workflows and converting tacit domain knowledge into product requirements.
- Defined product scope, production data model, MVP priorities and human-in-the-loop controls across two product generations, balancing automation with review where errors carry financial or production risk.
- Designed an applied-AI pipeline that turns unstructured screenplays into structured, reviewable production data using LLM orchestration, retrieval, embeddings, validation logic and contextual guidance.
- Built the working platform end-to-end from prototype to an Angular, Rails and PostgreSQL application, giving the team a product that could be demonstrated, tested and iterated with industry practitioners.
- Ran product demos and feedback sessions, translated stakeholder responses into product changes, and created walkthroughs, pitch materials and investor-facing product narratives.
- Contributed to commercial and strategic work around the product, including use-case framing, market positioning, fundraising, pitch decks and conversations with industry stakeholders.

Institute of Contemporary Music Performance (ICMP) — Internal Systems & Operations, Facilities & IT

2022–Present | London; operational role with self-initiated product and automation work

- Identified a recurring asset-inventory bottleneck, proposed a software solution internally, secured approval and built a lightweight tool that reduced the process from weeks to days.
- Deployed the system to non-technical staff across sites, observed real usage, gathered feedback and iterated the workflow around operational constraints rather than idealised requirements.
- Built follow-up reconciliation tools for large, inconsistent operational datasets, reducing manual checking between campus records and the organisation's asset-management workflow.
- Prototyped a retrieval-augmented assistant over internal policy and operational documents to improve self-service access to information and reduce routine escalation.

SELECTED PROJECT

Inceptal — AI Product, Independent Project

2026–Present | Creative marketing intelligence for independent artists

- Designing an AI-assisted workflow for creative marketing strategy using conversational context, external information sources and agentic research to surface insights, contradictions and recommendations.
- Shaping the product from the founder/product perspective: defining the user problem, workflow and decision-support experience while keeping the implementation deliberately lightweight during validation.

EDUCATION & ADDITIONAL

Le Wagon — Full-Stack Web Development Bootcamp

University of West London — BA, 2:1

Languages: English (native), French (native)
